

Benefits of Tool-Less Cam Assembly

- Enables positioning of the screen panel and ball tray without a wrench, increasing uptime when inspecting or changing screens/mesh cleaning balls
- Ensures uniform sealing pressure so that the screen panels are properly sealed every time
- Self-Locking handles eliminate both the locking nuts and the ability for users to close the doors prior to full engagement of the cams, which can lead to improper operation of the machine and premature failures
- Tool-Less Cams can be retrofit to your existing APEX Screener

▲ APEX™ Screener

Door Clamp Handle

Door clamp handle allows you to quickly open screen doors for access to ball trays and screens

Tool-less Cam

No wrenches are required to remove screens or ball trays for inspection or maintenance
